

Data transformation

The `filter` function

filter schematic

Structure of the `filter` function

```
name_of_dataset %>%  
  filter(rule_to_test)
```

```
name_of_dataset %>%  
  filter(rule_to_test1, rule_to_test2) %>%  
  filter(rule_to_test2 & rule_to_test4) %>%  
  filter(rule_to_test3 | rule_to_test6)
```

Replace `rule_to_test` with a test involving boolean operators and comparisons that will evaluate to a `TRUE` or `FALSE` value. `&` is the and boolean operator and `|` is the or boolean operator.
